EasyForms printing program

# **Benefits**

# Every feature you need for compliance labeling

The designer includes all the layout and data tools you need to design labels allowing easy compliance with industry standards.

# Work with large databases

You already have your label data in a database; why not use it to improve your labeling? Using queries you can extract only the data that you need. You can also combine records from two or more tables in a database using Joins.

# EasyForms give you simple error-free printing

EasyForms give your operator simple label printing, all **within one form**. This reduces dataentry errors, label misprints and duplicate serial numbers associated with printing from multiple dialogue boxes or label design programs.

# Easily create complex variables

Variable label data can come from as many sources as you need. Full serialization, including non-decimal serial numbers, custom barcode check digits, global variables, output masks, date/ time arithmetic and scripting help you easily create complex variables.
